

The DCEM2100 represents the latest generation of CODEL's unique opacity/dust monitors.

The DCEM2100 is a CEMS dual-pass dust monitor configured for the continuous measurement of opacity and dust in flue gases.

The DCEM2100 provides a continuous measurement of opacity or dust concentration in flue gases by continuously measuring the transmissivity of visible light across a process duct or stack.

Its dual-pass optical arrangement is based on twin transmissometers measuring in opposing directions through the same section of the gas stream, providing not only an accurate average of the dust loading, but also providing a unique dynamic assessment of any misalignment errors due to stack movement.

The measurement of opacity or particulate (dust) emissions from a process stack by measuring changes in optical transmission is simple in concept, but the monitor must be insensitive to any other factors that degrade the optical transmission such as contamination of optical surfaces or gross misalignment.

Features and Benefits

- Various path lengths from 0.5m to 15m with longer path lengths available on request
- Certified range of 0 to 0.1 Ext (0 20% opacity or 0 10 mg/m3 at 5m)
- Automatic shut-off valve in case of compressed air or power failure
- Fully selectable measurement range in % opacity, mg/m3, mg/Nm3, extinction
- TUV and MCERT certified.

Typical Applications

- Cement industry
- Waste incineration
- Power industry
- Wood industry
- Monitoring of filter plants
- Monitoring of ventilation units
- Chemical industry
- Steel industry

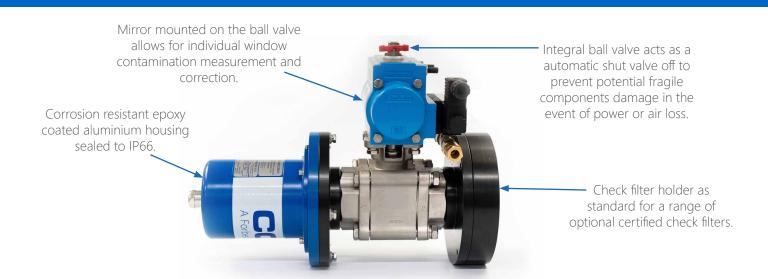

The DCEM2100 is CODEL's proven dust monitor, designed for use in various applications and certified to QAL1.

Dust Density Output

The outputs can be expressed in % opacity, extinction and after gravimetric calibration, in mg/m3 or mg/Nm3 (corrected to standard oxygen, temperature, pressure and H2O).

Contamination Compensation

A mirror mounted on the ball of the instrument can be automatically rotated into and out of the optical path of each transceiver. This enables the individual window contamination to be measured and corrected for each transceiver.

Technical Specification

Sa	nc	or	п	nit
э е	ns	or	U	nit

Sensor Unit			
Operating Principle	Dual-pass transmissometer		
Measuring units	% opacity, mg/m3, mg/Nm3, extinction		
Optical Path Length	0.5 to 15m, longer path lengths available on request		
Accuracy	+/- 0.2% opacity		
Response Time	10 Seconds		
Measuring Range Certified Range	Fully selectable in % opacity, mg/m3, mg/Nm3, extinction (Example 0 - 5000 mg/m3)** 0 to 0.1 Ext (0 - 20% opacity or 0 - 10 mg/m3 at 5m)		
Resolution	0.1% Opacity or 0.1 mg/m3		
Calibration	Auto zero and auto span		
Ambient Temperature	-20°C to +50°C (Certified) / -20°C to + 60°C (Maximum)		
Flue Gas Temperature	600°C maximum (Red LED) - up to 850°C Available On Request		
Power Supply	48V DC from Signal Processor Unit (SPU)		
Construction	Corrosion resistant epoxy coated aluminium housing sealed to IP66		
Compliances			
EMC	89/336/EEC directive compliant		
Low Voltage	73/23/EEC directive compliant		
TUV Certified (QAL1)	EN 15267-1 : 2009 & EN 14181 : 2004 , EN 15267-2 2009 & EN 15267-3 2007		
Customer Interface			
Analogue Outputs	$2\ x\ 4\text{-}20\text{mA}$ current outputs as standard, isolated, 500Ω load max, fully configurable from keypad		
Logic Outputs	2 x volt-free SPCO contacts, 50V, 1A max, configurable as alarm contacts 1 x volt-free SPCO contact, 50V, 1A max, for data valid signal		
Inputs	1 x volt free logic input for plant status or remote calibration initiation		
Serial Data	RS485 MODBUS protocol (Optional)		
Display	32 Character alpha-numeric back-lit LCD		
Keypad	4-key soft-touch entry		
Services			
Power	Mains 88 - 264 VAC, single phase, 50/60Hz 50VA		
Air Requirement	Clean and dry compressed air, 1 litre/sec @ 6bar		
Stack Gas Temperature			
Check Filter Holder	For insertion of optical Check Filter		
Check Filters	20%, 40%, 60%, 80% Check Filters available
